

ERGOCTO[®] Xe

CONTROL ACTIVATION GRIP

PRODUCT OVERVIEW

The Wilcox line of ERGOCTO[®] Xe Control Activation Grips is the next generation accessory that is ergonomically positioned for the user to control the Wilcox line of “Xe” laser and fire control devices. The ERGOCTO Xe Control Grip mounts directly to the 3, 6, or 9 O’Clock rail position of the weapon with a unique grip design that allows for up to eight (8) radial positions of the control button by the user. The integrated control button has an over-molded skin featuring a tactile surface that helps prevent slippage of the weapon grip when controlling the device. Two End Caps are supplied, a stubby and an extended length. The ERGOCTO Xe Control Grip provides a very low-profile stance on the rail that prevents snag hazard and does not interfere with the user’s natural position when handling a weapon. The ERGOCTO Xe Control Grip is available in two configurations: a single cable configuration that connects securely to Wilcox laser products or a dual cable configuration that connects securely to Wilcox Laser products and to any SUREFIRE[®] flashlight product that has the tail-cap interface.

FEATURES AND BENEFITS

- Provides low profile anti-snag attachment to any MIL-STD-1913 Picatinny rail
- Ergonomically designed grip with vertical and horizontal ribs prevent slippage during weapon fire
- Rubberized grip allows for customized positioning of up to eight (8) radial locations for ergonomic placement of the control button by the user
- The control button on the pressure pad is distinctive in shape, enhancing the user’s ability to locate the button while wearing gloves
- Removable End Caps provides stowage compartment for one (1) CR123 Battery
- Stubby and extended length End Caps are supplied for user preference
