

RISER KITS

RISER SYSTEMS WITH FLIP MOUNTS

PRODUCT OVERVIEW

Wilcox Riser Systems raise optics off the receiver for better compatibility with protective masks and mission gear or to provide a more upright shooting position when aiming down the optic. Precision flip action returns to zero and positive detents hold both stowed and active positions. The robust force-to-overcome design holds securely in both positions with no wobble. The interface shoe snaps into the base and a spring-loaded bar lets the operator quickly remove or flip the magnifier. Riser options: 0.410" or 5/8" (0.625") heights in right or left hand variants; attachment via thumbscrew or low-profile set-screw (tools required). Full kit includes a small 1913 riser for front Backup Iron Sights.

FEATURES AND BENEFITS

- Riser system for gear clearance and to provide more upright head position when aiming
- Available in 0.41" and 5/8 (0.625") heights
- Improves compatibility with protective masks and helmets
- Stiff force-to-overcome design holds securely in both positions and returns to zero when re-engaged
- Quick-detach magnifier Interface
- Thumbscrew for tool-less install
- Set screw for low profile (requires tools)
- Compatible with EOTECH[®] and Wilcox 3X Magnifiers

SPECIFICATIONS

Set Screw Torque: 15 in/lb
Thumb Screw Torque: 25 in/lb
Flip Mount Thumb Screw Torque: 25 in/lb

Available Colors: ■-B
